

Dear Sir / Madame,

We are two students from the Joseph Fourier University in Grenoble in France searching help in finding a company willing to offer us an internship.

We have just started the last year of our studies at the Chemical Department, working on our specialization in chemical processes and treatment of effluents. We will be graduating next year as engineers of water quality getting a Master degree in Engineering. It is the requirement of our studies that during its last part we go through the 20-week internship period. Its objective is to solve during that time a real, complex problem for the real company. Our schedule allows us to conduct such a work starting on or after the 26th of January 2009.

We would truly appreciate having an opportunity to realize our internship abroad, as it can give us a chance to gain new experiences and broaden our professional knowledge.

We are two dynamic and motivated students willing to both learn a lot and give our best to the company that we become involved with.

Below please find additional information about us.

Should you be able to help us in finding a company that could accept us as workers on internship bases or should you have any leads that would allow us to achieve our goal please, contact us at: pasquier.thibault@voila.fr or at ph.: (+33) 679 826 416. We will greatly appreciate it.

Yours faithfully,

Dorota and Thibault

Dorota Juchniewicz
